SUMMARY

I build web services end to end, from the database schema and the API to the interface on top, mostly in Java, Python and TypeScript. I want to keep doing that on software people actually use.

EDUCATION

MIT ADT University

Bachelor of Technology in Computer Science and Engineering / CGPA: 8.68

Pune, India

Expected May 2027

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript

Databases: PostgreSQL, SQLite

Frameworks & Libraries: Spring Boot, FastAPI, Express, SQLAlchemy, pydantic-ai, GeoPandas

Tools & Platforms: Git, Docker, Maven, Render, Linux

EXPERIENCE

AI-ML Virtual Internship

AICTE – EduSkills, supported by Google for Developers (India Edu Program)

April – June 2025

Remote

– 10-week program covering TensorFlow, image classification, object detection and product image search.

PROJECTS

disputeledger | 🐙 GitHub | 🌐 Live | *TypeScript, Express, SQLite, Zod*

- Built a dispute tracker for supply chain partners: disputes, evidence and an arbiter's ruling, all on an append-only event log.
- Chained the events with HMAC-SHA256, keyed outside the database, so a row edited in SQLite fails the integrity check, which names the event.
- Kept the dispute rules in a module with no I/O and tested them with Vitest and supertest; passwords use scrypt with a timing-safe compare.

trafficengine | 🐙 GitHub | 🌐 Live | *Java 21, Spring Boot 3.4, Spring Data JPA, PostgreSQL, Docker*

- Built a Spring Boot service that checks speed readings against zone limits, works out tiered fines and stores citations in PostgreSQL.
- Kept the rule engine as plain Java with no Spring in it and the limits in `application.yml`, so a policy change is a config change.
- Tested with JUnit 5 and MockMvc; packaged with Docker and deployed on Render with a managed PostgreSQL database.

geoagent | 🐙 GitHub | *Python, FastAPI, pydantic-ai, GeoPandas, OSMnx*

- Built a chat app that turns plain-language GIS requests into GeoJSON, GeoPackage and GeoTIFF files from OpenStreetMap and Sentinel-2.
- Limited the LLM to choosing tools: coordinates never come from the model, so every geometry calculation is done in Python.
- Ran each request as a task with explicit states and streamed its progress to the browser over server-sent events.

CERTIFICATIONS

Java Programming (Duke) | Data Structures (UC San Diego) | Neural Networks and Deep Learning (DeepLearning.AI), all on Coursera
