EDUCATION

MIT ADT University

Pune, India

Bachelor of Technology in Computer Science and Engineering / **CGPA: 8.68**

Expected May 2027

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Operating Systems, Computer Networks, Software Engineering

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript

Databases: PostgreSQL, PostGIS, MySQL, Redis

Frameworks & Libraries: Spring Boot, FastAPI, Flask, Spring Data JPA, Scikit-learn

Tools & Platforms: Git, GitHub, Docker, Postman, Linux, Maven

EXPERIENCE

AI-ML Virtual Internship

April – June 2025

AICTE – EduSkills, supported by Google for Developers (India Edu Program)

Remote

- Completed the 10-week AICTE–EduSkills AI-ML virtual internship, supported by Google for Developers, for fifth-semester internship credit.
- Covered TensorFlow, image classification, object detection and product image search through Google Developers ML pathways, earning a skill badge for each.

PROJECTS

Supply Chain Dispute Ledger | 🐙 GitHub | Hyperledger Fabric, Node.js, Express, gRPC, JWT

- Built a dispute resolution system on Hyperledger Fabric: supply chain partners raise disputes and attach evidence, arbiters resolve them, and every action is timestamped on an append-only ledger.
- Enforced role-based access control on-chain in the chaincode rather than at the API edge, so a compromised gateway cannot bypass authorization.
- Wrote an Express REST gateway that talks to the Fabric Gateway over gRPC/TLS, secured with JWT, Helmet and rate limiting.

GeoAgent: Geospatial Microservices Platform | 🐙 GitHub | FastAPI, GeoPandas, Shapely, Redis, Docker

- Split the platform into two FastAPI microservices: a Vector Agent for boundary geocoding and a Raster Agent for satellite imagery clipping.
- Added WebSocket log streaming and geometry repair for malformed coordinates and invalid polygons.
- Integrated Gemma for natural-language spatial queries; deployed the services with Docker Compose.

Traffic Violation Management System | 🐙 GitHub | Java, Spring Boot, JPA, PostgreSQL, Docker

- Built a rule engine in Java and Spring Boot that evaluates speed events against configurable thresholds and calculates tiered fines, exempting emergency vehicles before any penalty applies.
- Designed the REST API and a Thymeleaf dashboard over PostgreSQL, with H2 for local runs.
- Tested the engine with JUnit 5 unit tests and MockMvc integration tests, and validated request payloads with Jakarta Bean Validation.

CERTIFICATIONS

Java Programming: Solving Problems with Software – Duke University, Coursera

Data Structures – University of California San Diego, Coursera

Advanced Java – LearnKartS, Coursera

Neural Networks and Deep Learning – DeepLearning.AI, Coursera
